

KANZ Broadband Summit: Digital Futures

4-5 NOVEMBER 2009, AUCKLAND, NEW ZEALAND

The Korea Australia New Zealand Broadband Summit is an annual forum for business and government officials from the three countries to come together to discuss the latest research and commercial developments in digital applications and content and broadband infrastructure.

The Summit will provide delegates with opportunities to establish new collaborative ventures and develop wider trade relationships between the three countries.

The 2009 event is being held in Auckland, New Zealand and will have a strong commercial appeal focusing on the economic outcomes that result from robust high-speed broadband infrastructure.

Summit topics will include:

- New businesses spawned from broadband
- How broadband is accelerating and transforming traditional business
- The impact of broadband - beyond connectivity and economics
- Services and applications
- Policy and regulation
- The impact of ICT on green energy, carbon emissions
- Digital content, online gaming, remote applications

- Cyber safety and security
- Research and development and the digital future
- Cloud computing
- Mobile applications
- Visual business intelligence
- Robotics and high precision GPS

The KANZ Broadband Summit: Digital Futures will bring together government officials and business leaders from commercial and research organisations who are shaping the policy, infrastructure and commercial futures of Korea, Australia and New Zealand. Companies with an interest in the digital future are invited to participate and to showcase their technology.

The KANZ Broadband Summit will be hosted by New Zealand's Minister for Communications and Information Technology, Hon Steven Joyce, and has the support of the Korean Communications Commission and the Australian Department for Broadband, Communications and the Digital Economy.
